WHAT IS PKP?

Our mission

we have more than 20 years ...
with the goal of improving the quality and quantity of:
knowledge that is made public
and improving the quantity and quality
of the participation in the creation of that knowledge

beyond OJS: three pillars of work

Open Source Software

OJS - journals, OMP - monographs, OPS - preprints

Research, Education, and Advocacy

- research about OA, metrics, economic models, intellectual property, academic careers
- online courses
- taking into account a global context

PKP Publishing Services

- Hosting (\$)
- PKP preservación
- Paperbuzz Metrics

Characteristics

- Distributed Open Source software
- Institutional, national, single journal, alternate use...
- Monolingual or multilingual; translations may be proprietary
- May be any of dozens of releases
- May be heavily modified (theme, ownership, ...)
- May be a test, password-protected, open access, subscription-based

Hard to gather, hard to measure.

MEASURING OUR COMMUNITY: FIRST ATTEMPTS

How did we know who used OJS? (1998-2015)

- Referrer URLs in pkp.sfu.ca logs
- Support forum
- Google searches for characteristic phrases

Useful for qualitative but not quantitative purposes.

MEASURING OUR COMMUNITY: BEACON (2015-present)

How the Beacon works

Identification	Inspection	Deduplication	Location	Filtering
The Beacon feature in OJS identifies the installation to PKP. (This optional interaction was introduced with OJS 2.4.7.)	PKP uses the public OAI-PMH interface to collect basic details of the installation and its contents.	The resulting dataset is deduplicated.	Further information about each journal is identified: ISSN, country, etc.	Further deduplication and filtering are performed on the resulting dataset.
<i> </i>	Code: <u>https://git.lib.s</u>	fu.ca/pkp/beacon		

How the Beacon works: Identification

1. When enabled, OJS can check if your version is up to date.

System Information

Current version: 3.2.1.3 (February 4, 2021 - 08:31 PM)

Latest version: 3.3.0.6 (April 29, 2021)

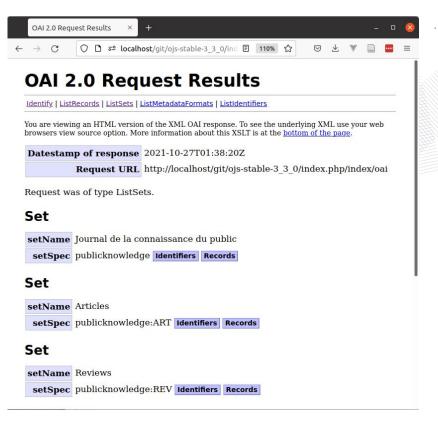

An updated version is available: Download | Download Patch | More Information

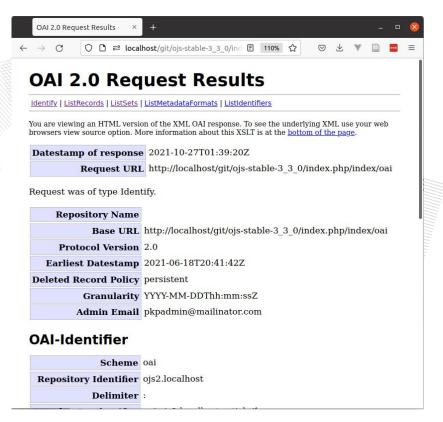

2. When OJS asks what the latest version is, it tells PKP its URL (and ID).

"GET /ojs/xml/ojs-version.xml?id=&oai=https%3A%2F%2Fdemo.publicknowledgeproject.org%2Fops%2Ftestdrive%2Findex.php%2Findex%2Foai HTTP/1.0'

- If it's public, PKP can use the OAI-PMH interface to get more information.
 (ISSN, technical support contact, list of journals, etc)
- 4. No other data is exchanged.

How the Beacon works: Inspection

How the Beacon works: Deduplication

- Identify duplicates
 - ISSN
 - Journal name or identifier (OAI set spec) and at least two matching fields from Stats ID, Hostname, Earliest date stamp, Administrator email, Repository name
- Choose a leader from among the candidates using in priority):
 - The journal which is already a "leader"
 - The installation isn't disabled
 - The journal isn't disabled or removed
 - The journal isn't unresponsive (failed to be synchronized for at least 30 consecutive days)
 - The journal which was last successfully synchronized
 - The journal which the installation failed to synchronize less often
 - The journal that sent the latest beacon signal

How the Beacon works: Location

- Use WorldCat API to look up ISSN
 - Map the resulting MARC country code to an ISO3166 country code
- Alternately, look at the top-level domain
- If those fail, geolocate the server's IP address
 - This method skews to server locations rather than journal location.

How the Beacon works: Filtering

- Exclude journals that cannot resolve to IPv4 addresses (e.g. intranet)
- Exclude apparent test instances (the journal's name or its URL contain the words "test", "dev", "demo", "theme")
- Exclude URLs with IP addresses (e.g. http://255.255.255.255)
- Only for the map:
 - Exclude journals which we were unable to reach (e.g. unexpected errors, timeouts, network issues, ...) for at least 30 days.
 - Exclude journals which haven't published at least 5 articles in a given year

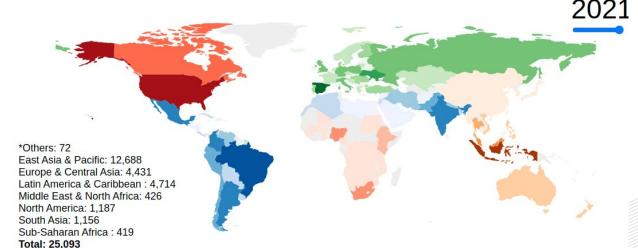

CURRENT RESULTS

>25,000 Active Journals

CURRENT RESULTS: GEOGRAPHICAL

Journals Publishing with Open Journal Systems (OJS) by Year and Region

Notes

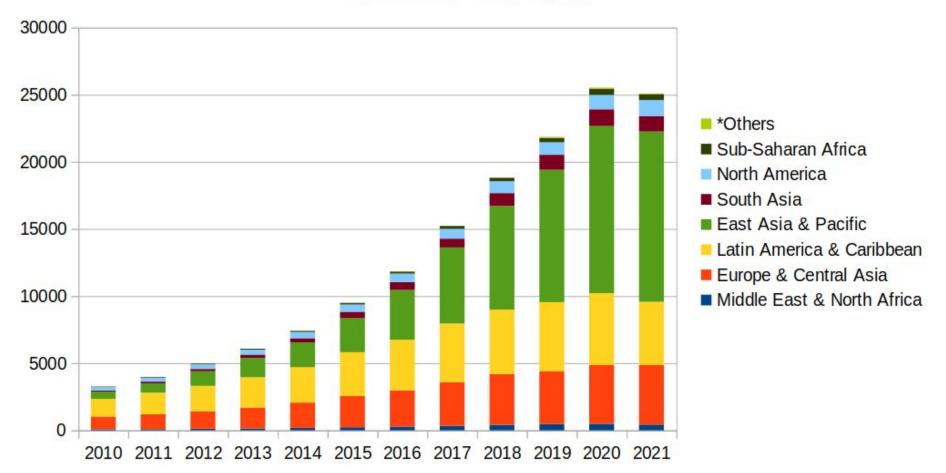

This map shows journals using Open Journal Systems (OJS) available online sometime in the past 30 days. Each year only shows journals with at least 5 published articles in that year. The numbers do not represent the rate of adoption (many journals only upload back issues without publishing any current content, skip a year, or go offline).

- URLs for installations were found by tracking referrer addresses in the PKP website log left by the OJS beacon feature. Since
 inclusion in the OJS beacon is an opt-in feature, some journals will be excluded and not reflected in the data.
- · Region totals refer to journals, not installations.
- Journals are counted for any given year if they have at least 5 articles published that year. Any journal not meeting this criteria is not included in these numbers.
- Journal content was found using the OAI PMH API.
- Country of origin of a journal is determined as follows (in order of preference): by looking at the ISSN of a journal, its top-level domain, or by GeoIP lookup of IP address. This method has its limitations and is known to be skewed towards the location of hosting servers.

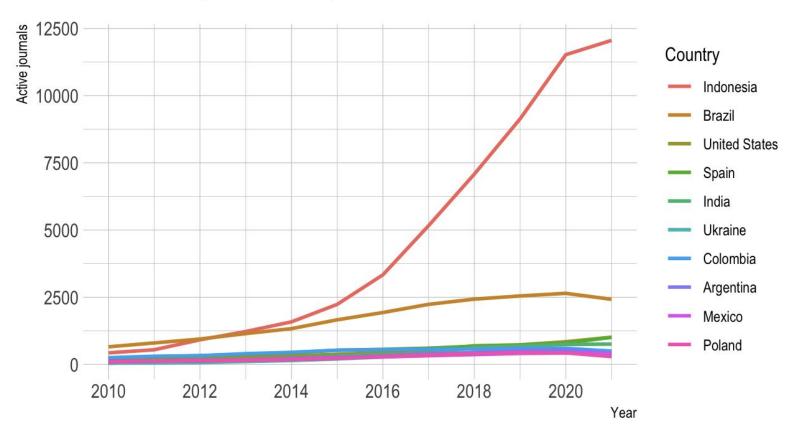

https://pkp.sfu.ca/ojs/stats

- Shows growth of active OJS journals by year
- Uses submission publication dates
- Data: <u>https://pkp.sfu.ca/ojs/stats/</u> data/beacon.csv

Journal count by region

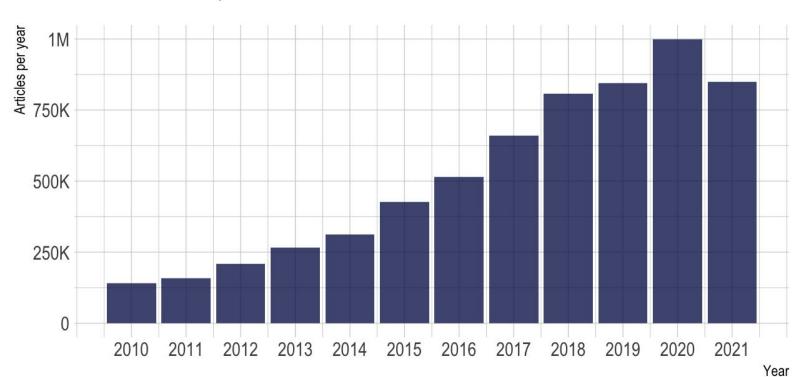

Growth in active journals for the top 10 countries

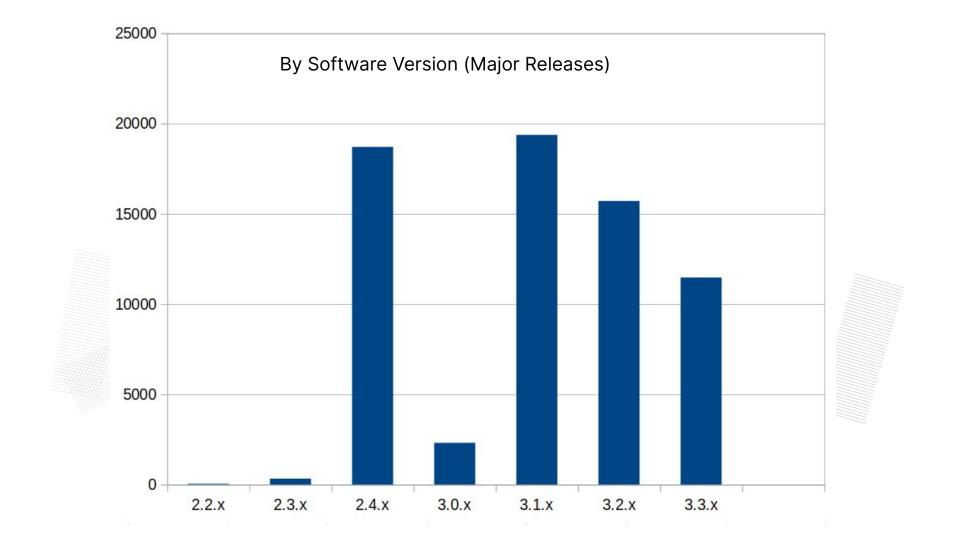

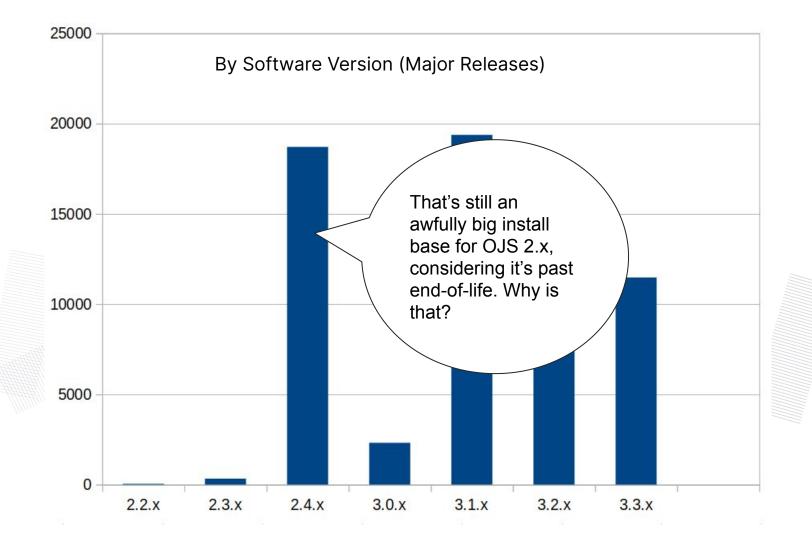

Articles published per year in OJS journals

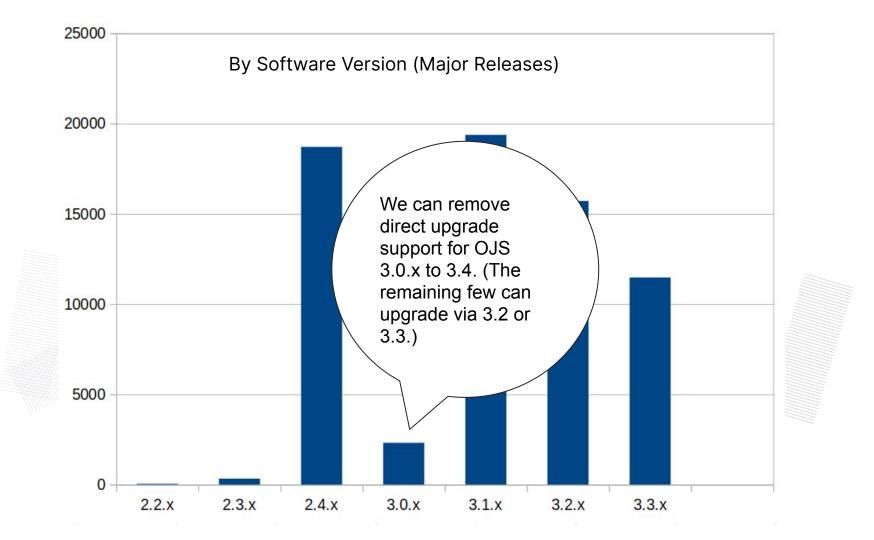

6.18 million articles published since 2010

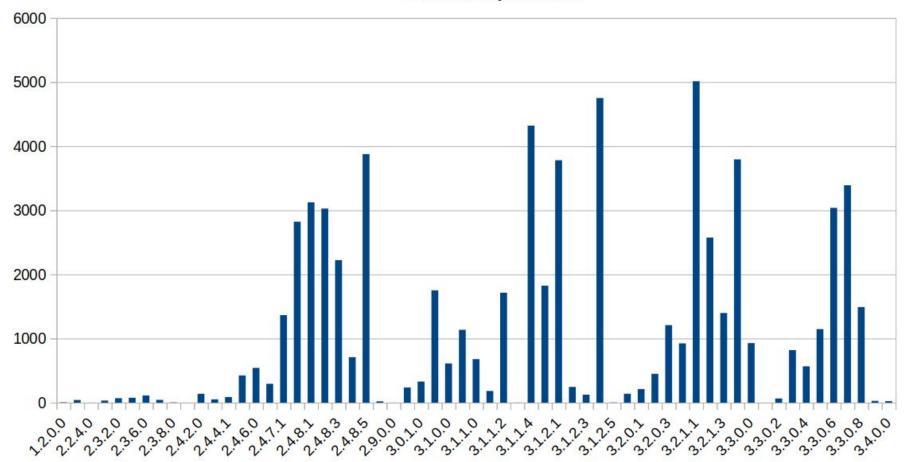

CURRENT RESULTS: SOFTWARE VERSION

FUTURE RESEARCH

Research Questions

- 1. What is the distribution of academic disciplines among journals using OJS?
- 2. What are the causes of the current academic publishing boom in Indonesia?

Other opportunities

- What other translations (communities) exist in the wild?
- What alternative kinds of content are stored in OJS/OMP/OPS?
 - Grant management; fiction; Institutional Repository
- How can we ensure journal integrity?

QUESTIONS
